

Risk Encountered from Risk Register

Sprint 2 (01/10/24)

R2	Team members are inexperienced with chosen programming language	Occasional bugs and some difficulty getting features fully working either due to member's never implementing similar features before or inexperience using the programming syntax.
R3	Programming errors are merged into the main branch of the repository	Shaun encountered a merge error as he was working on the css styling for more than a week. New features and new naming changes were made on the web app, causing a merge error when he was pushing.
R7	Multiple people unintentionally working on the same sprint task	A lack of communication lead to some confusion and resource mismanagement as Jae and Shaun had worked and completed the same task regarding creating an interface for new users which could have been prevented with better task distribution
R9	Team unable to compromise on a final design feature	We were told that our product owner wants a purple themed web app but we were unable to find the correct purple colour scheme that everyone was satisfied with. Shaun went over 3 whole iterations of designing the app with different colour schemes and formats.
R13	Group members sustain physical injuries	Jae's ankles were destroyed from basketball and EIGHT mossie bites. He was unable to join our team meeting in person, but he compromised by joining online.
R21	Sickness within the team	Bernice got a flu before the mid-semester break and she was unable to work. The team, especially Jae, redistributed her assigned tasks and kept her updated during recovery.
R23	Team members experience hardware malfunctions	Jae's laptop broke leading him to be unable to pull and push the team's work from and to git.
R25	Mental health issues amongst team members	Due to an overwhelming amount of assignments, many of the group members were feeling stressed and overwhelmed.
