NFR and DoD Discussion Meeting

Date	20/09/2024
Time	5:00PM - 6:00PM
Sprint	2
Attendees	Andrique, Gwyneth, Melissa, Jaemin, Shaun
Apologies	Bernice

NFR: Have the ability to adjust font sizes

Discussion Points	Notes
How are the font size increments set up?	- There will be a slider that can adjust the size of the font
Is the font size permanently set with a specific user?	- Different users can set up their font size differently.
Is the font size applied globally?	- Users would have different settings set up to improve their personal usabilities. - Each page will have its own separate slider on the navbar
Having an accessibility database	- Consider having a separate database for accessibility, which the system checks if there is an entry, which represents a preset font size.

Changes to the Definition of Done:

Changes	Reasons
Remove Unit testing, Integration testing and regression tests	- Due to time constraints and lack of resources to perform this testing, on top of a lack of testing environment

	- The size of the project is small, so such extensive testing is not necessary and is time consuming, manual testing should be sufficient.
Elaborate on Code Review to include specific criteria	- Code review was too vague, no specific criteria outlined - Added some criteria as a sub checklist
Simplify Deployment	- Lack of resources for dedicated testing and development environments. - As long as it runs, it runs
Remove redundant condition in Product Owner Acceptance	- Gaining the PO's approval and gaining the PO's acceptance are the same thing
Replace Performance and Usability with Usability and Accessibility	- Integrate NFR into DoD - Remove UI/UX standards since they were not defined, the PO's NFR will act as our usability and accessibility standard

Action Items	Owner
- Update Definition of Done to include NFR	Andrique, Gwyneth
- Add NFR user story to Jira	Jaemin
